- 2. (Currently amended) The method according to claim 1, <del>characterized in that wherein the aluminum silicate catalyst material added contains at least 40 % by weight of aluminum oxide and at least 40 % by weight of silicon oxide.</del>
- 3. (Currently amended) The method according to claim 1, characterized in that wherein the aluminum silicate catalyst material added contains up to 5 % by weight of magnesium oxide.
- 4. (Currently amended) The method according to claim 1, <del>characterized in that</del> wherein the aluminum silicate catalyst material added contains up to 1 % by weight of titanium oxide.
- 5. (Currently amended) The method according to claim 1, <del>characterized in that wherein the aluminum silicate catalyst material added contains up to 5 % by weight of sodium and/or potassium oxide.</del>
- 6. (Currently amended) The method according to claim 1, characterized in that wherein the aluminum silicate catalyst material added contains up to 5 % by weight of rare earth oxides, particularly lanthanum oxide.
- 7. (Currently amended) The method according to claim 1, <del>characterized in that wherein</del> the aluminum silicate catalyst material added is a synthetic zeolite powder.
- 8. (Currently amended) The method according to claim 7, <del>characterized in that wherein the zeolite powder is subjected to a calcination pre-treatment before it is added to the mineral melt.</del>
- 9. (Currently amended) The method according to claim 7, <del>characterized in that wherein the particle size of the zeolite powder is below 100 µm.</del>
- 10. (Currently amended) The method according to claim 7, characterized in that wherein the zeolite powder contains zeolite of types A, X, Y or ZSM.
